I_H = Hold Current. Maximum current device will not trip in 25°C still air.

I_T = Trip Current. Minimum current at which the device will always trip in 25°C still air.

V_{max} = Maximum operating voltage device can withstand without damage at rated current (I_{max}).

I_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max}).

T_{trip} = Maximum time to trip at assigned current.

P_{dTyp} = Typical power dissipation when device is in the tripped state in 25°C still air environment at rated voltage

R_{min} = Minimum device resistance prior to tripping at 25°C.

R_{1max} = Maximum device resistance is measured one hour post reflow.
